## HEALING THE PLANET ONE BOTTLE AT A TIME™

Back to the Tap Redi-Chlor Water Disinfection Tablets are the newest unique product on the market today specifically designed for emergency water needs for Disaster Relief, Emergency Preparedness, Humanitarian Relief, Natural Disasters, Military, Bulk Water Storage, Camping, Hunting, RV's, Consumer Stock etc.

Our Redi-Chlor tablets are comprised of dry chlorine that is EPA (Environmental Protection Agency) registered for use in disinfecting drinking water. Chlorine is the method of choice for drinking water disinfection by more than 98% of the municipalities and rural water districts here in the US. The 1/4 gram tablet is designed to disinfect 5 gallons of water per tablet.

The tablets are double scored to enable the user to split the tablets, to disinfect smaller quantities of water. Each pack of Back to The Tap Redi-Chlor tablets consists of 10 tablets (1 blister packet/card containing 10 tablets). This 1 pack is enough tablets to disinfect as much as 20 gallons of water. The recommended dosage as listed on the dosage chart included with the pack is for a total chlorine dose of 9 ppm (parts per million) total available chlorine to the prescribed quantity of water.

Free chlorine, the amount of residual chlorine remaining after chlorine demand has been met, is what is necessary to adequately disinfect water of bacteria and viruses. According to World Health organization statistics, ten million plus people die every year throughout the world from drinking biologically contaminated water. It is our hope, that with the availability of our Redi-Chlor tablets, this carnage can be greatly reduced. Remember water is a precious commodity and our water supply changes everyday around the world as more people are desperately searching for a way to store safe drinking

water for their family. With Redi-Chlor you do not have to boil water anymore or add bleach or Iodine tablets to to disinfect questionable water. Redi-Chlor allows a safe, convenient alternative that's EPA (Environmental Protection Agency) registered.

Used in conjunction with Back to The Tap Biological Bottles, the tablets make hazardous water drinkable again. Just drop in your Redi-Chlor tablet and you can be assured that you are drinking the highest quality of disinfected water available. Stock up or order your Biological Complete System now and be prepared for either Home or Travel Emergency Relief.

### DOSAGE CHART
